

FocusManager Class

Provides a set of static methods, attached properties, and events for determining and setting focus scopes and for setting the focused element within the scope.

Definition

```
public static class FocusManager
```

Summary

The following table summarizes the members exposed in this class.

Fields

FocusedElementProperty	
GotFocusEvent	
IsFocusedProperty	
IsFocusScopeProperty	
LostFocusEvent	

Static Methods

GetFocusedElement(DependencyObject)	
GetFocusedElement()	
GetFocusScope(DependencyObject)	
GetIsFocused(DependencyObject)	
GetIsFocusScope(DependencyObject)	
SetFocusedElement(DependencyObject, DependencyObject)	
SetIsFocused(DependencyObject, bool)	
SetIsFocusScope(DependencyObject, bool)	

Fields

```
public static readonly DependencyProperty FocusedElementProperty
```

```
public static readonly RoutedEvent GotFocusEvent
```

```
public static readonly DependencyProperty IsFocusedProperty
```

```
public static readonly DependencyProperty IsFocusScopeProperty
```

```
public static readonly RoutedEvent LostFocusEvent
```

Static Methods

```
public static DependencyObject GetFocusedElement(DependencyObject obj)
```

Parameters

obj	
-----	--

public static object GetFocusedElement()

public static DependencyObject GetFocusScope(DependencyObject element)

Parameters

element	
---------	--

public static bool GetIsFocused(DependencyObject obj)

Parameters

obj	
-----	--

public static bool GetIsFocusScope(DependencyObject obj)

Parameters

obj	
-----	--

public static void SetFocusedElement(DependencyObject obj, DependencyObject value)

Parameters

obj	
value	

public static void SetIsFocused(DependencyObject obj, bool value)

Parameters

obj	
value	

public static void SetIsFocusScope(DependencyObject obj, bool value)

Parameters

obj	
value
