

Intersoft.Client.UI.Aqua.UXFlow Assembly

Remarks

Intersoft ClientUI brings application development to the next level with innovative multimedia controls such as [UXFlow](#) and [VideoPlayer](#).

The [UXFlow](#) control lets you create stunning presentation in the fashion of true 3D perspective which produces identical result across Silverlight and WPF platform. Its new high-performance flowing algorithm delivers ultra smooth animation, even when you have relatively large items to show.

Use [VideoPlayer](#) when your application needs a standalone, streaming media playback equipped with complete playback control panel. The [VideoPlayer](#) sports an elegant, glossy black theme that suits your next-generation media application.
